

FinWise — Device Test Plan (build 1.0.8)

Goal: verify every fix from your feedback (#1–#16, #20) + the taxonomy + privacy work, on a real device

Setup (do this once):

1. Install build 1.0.8 from TestFlight (highest build number).
2. Settings → Delete account (if signed in), so you test a fresh create+onboard journey.
3. Create a new account and go through onboarding end-to-end.

How to record results: put Pass / Fail / Blocked in the Result column; add anything odd in Notes.

Priority: P0 = must pass to ship · P1 = important · P2 = polish.

If a P0 fails, note it immediately — that gates the build.

via TestFlight.

ID	Area	Pri	Test case
T01	Account / #1	P0	Recovery code is instant; no frozen checkbox
T02	Privacy / B-L1	P1	Privacy claim on the recovery screen (larger font)
T03	Privacy / B-L1	P1	Privacy claim in Settings (larger font)
T04	Auth	P1	Sign out and back in
T05	Auth	P2	Forgot password → recovery restore
T06	Onboarding / #7	P1	Income paycheck is labeled "Take-home"
T07	Onboarding / #4,#5	P1	Surplus is labeled "Surplus"
T08	Onboarding / #6	P0	Monthly and yearly surplus reconcile
T09	Onboarding / #8	P1	Traditional vs Roth captured separately
T10	Onboarding / #2	P2	Grow & Track options
T11	Onboarding / #3	P2	Short-term rental income
T12	Onboarding / #16	P2	Expense categories are consistent
T13	Net Worth / #19	P0	Donut grouped by asset class
T14	Net Worth / #10	P0	Retirement not assumed Stocks/ETFs
T15	Net Worth / #9	P1	Assets – Debts = Net worth identity
T16	Net Worth / #18	P1	Negative net worth shows red

T17	Net Worth / #9	P1	Guided setup shows components Bond inside a 401(k) does NOT double- count
T18	Net Worth / #14	P0	
T19	Import / #12	P0	Real brokerage CSV imports
T20	Import / #12	P2	Odd-encoding CSV imports
T21	Import / #13	P2	Import is discoverable
T22	Cash flow / #15	P1	Cash Flow detail screen
T23	Retirement	P1	Monte Carlo odds + range
T24	Disclaimers / B-L3	P1	Disclaimer at every projection
T25	Disclaimers / B-L3	P2	RMD phrased as a fact
T26	Bonds / #11	P2	Maturity date picker saves the default
T27	Keyboard / #20	P2	Retire % field clears the keyboard
T28	Tips / B-L1	P2	Tips run on-device
T29	Stability	P1	No crashes navigating everything

T30	Account	P1	Delete account works
-----	---------	----	----------------------

Steps

Create account → tap Create

Look at the recovery-code screen

Settings → Security section

Settings → Sign out → sign in again

Sign-in → Forgot password → reset → sign in

→ enter recovery code

Onboarding → income screen, then the
spending-plan screen

Onboarding → spending plan + the full recap

On the recap + savings-plan screens, compare
the monthly average $\times 12$ to the yearly surplus

Onboarding → "Your 401(k) & retirement
savings"

Onboarding → "What brings you to FinWise?"

Onboarding → rental property → short-term
Compare onboarding spend categories to the
Add-Expense categories

Net Worth tab

Add a 401(k)/IRA with just a balance (no
holdings) → Net Worth donut

Net Worth screen

Make debts exceed assets

Net Worth → guided "add cash / investments / debt" setup

Add a \$200k 401(k); then add a \$100k bond as a 401(k) holding

Import your E*TRADE CSV

If you have an Excel-exported (UTF-16) CSV, import it

Net Worth tab (and during setup)

Home → tap "Cash-flow detail →"

Retirement / cockpit

Open Retirement, Net Worth/Analytics, Home, Stress Test, Job Safety

Retirement cockpit (age $\geq$ 73 persona) → RMD note

Add a bond → open the maturity date picker → tap Save without scrolling

Retirement → edit "what counts toward retirement" → tap the % field

Tips screen → Analyze my expenses

Open every bottom tab + the Menu → each module

Settings → Delete account (re-enter password)

Expected result	Result
Recovery code shows immediately; a "Securing your account..." spinner runs; the "I've saved it" checkbox is disabled for a few seconds then enables; Continue proceeds to onboarding	pass
Shows "  End-to-end encrypted · never sent to AI" (emphasized) + body "never sent to AI or LLM providers"	pass
Shows "encrypted ... even we can't read it ... never sent to AI or LLM providers" in a larger font than nearby rows	
Signs back in; your data is intact	
Data is restored after entering the recovery code	
Both call the paycheck "Take-home" (NOT "Available to use"); the per-month number matches on both screens	pass
The leftover is called "Surplus" (NOT "Free to save" / "Left to save" / "You can save")	pass
Monthly surplus $\times 12 \approx$ yearly surplus (no mismatch like 3032/mo vs 27380/yr)	fail
TWO input fields: Traditional / pre-tax AND Roth / after-tax	fail
Under "Grow & track": Track my investments · Track my property & belongings · See my net worth	fail
Captures a monthly average (acknowledges rent varies); not a fixed "Rent / month" only	pass
Same category list everywhere (no duplicate "Rent" lines / mismatches)	pass

Donut slices are ASSET CLASSES (Cash, Stocks/ETFs, Bonds, ...) with the net-worth total in the center

It shows as "Unclassified" (NOT lumped into Stocks/ETFs)
 An explicit line "Assets X – Debts Y = Net worth Z" is shown
 The NW chip + the donut center turn red

Each step shows its own components / the Assets – Debts breakdown, not a confusing running NW total that includes things not on that screen Pass
No parallel double-counting account; the wrapper total is right (not \$200k + a separate \$100k inflating retirement)

Reads it (no "We couldn't read that file"); imports the holdings; CD/money-market → Cash, option → Alternatives, stock → Stocks/ETFs fail

It still reads (the encoding fix); no "couldn't read that file"

An Import option is visible on Net Worth and flagged in setup (not buried in Performance only) pass

Opens a screen with: a typical-month breakdown (ends in "= Surplus"), month-by-month surplus, take-home vs spending, and this month's planned vs actual fail

Shows a chance-of-success and a p10–p90 band; wording says it's a range, "not a promise" pass

A small "Estimates for guidance only — not financial advice..." footer appears on each fail

Reads "the IRS requires a withdrawal of about \$X" (NOT "you must withdraw")

The shown default date is saved (no need to spin the wheel first)

The field lifts above the keyboard (not hidden behind it)
Tips appear instantly; a larger line says "Computed on your device — never sent to an AI provider"

No red error screens / crashes; numbers render

Account + data removed; signed out

Notes

font too small. Increase font,
and restructure paragraph.

Home screen Cash-Flow box
still labels it as Left-over
versus surplus.

income 4 of 12 is still 401K
contributions

Net worth Donus list
investment as Stock/ETF. No
where we are explaining
what's included in
investment, versus
Cash/Cash Equivalent versus
Real Estate and Property.
401K/Roth = Unclassified. At
the top of the donut we
should explain asset classes.

Net worth setup flow asks for
Cash, Investments, Property
& Debt

We couldn't read that file.
Your data is safe - try
exporting a csv from your
brokerage and pick it again.
(Details: Method
readAsStringAsync imported
from "expo-file-system" is
deprecated. You can migrate
to the new filesystem API
using "File" and "Directo)

Import is on NW screen. But
the box need to be organized
logically. Box currently says -
Import, Portfolio, Bonds,
Other investments (non-
compliant with taxonomy)
when click on cash flow
details it comes back to same
screen

only see the language on
"stree test an emergency"
screen.

Onboarding

Income 6 of 12

Flow Tested

Annual bonus = \$25000 paid in Dec

base salary = 25000

401K contribution = 1500

employer match = 50%

Equity-based compensation - stock options (strike price 25, market price 26); vesting schedule =

100 in June'26, 200 in Nov'26, 500 in Feb'27

self-employment income per year = 25000

Interest & dividends = 35000 annual

rental property -> short-term, avg rent/mo = 3000, operating expense/mo = 2500
