

Launch Checklist

Everything left to ship v1, by phase. 'Type' = Blocker (can't ship without) / Recommended / Optional. Owner: yellow 'Your rank' + 'Decision' columns are PRE-FILLED with Claude's recommended order — override freely. †

ID	Phase	Item	Owner
L-1	1.1	Swap market data to a LICENSED vendor (Tiingo / EODHD / AlphaVantage / TwelveData) — replace the unlicensed Yahoo endpoint	You→Claude
L-15	2.6	A-1 — One income base (take-home) drives every %-of-income spending category	Claude
L-16	2.6	A-2 — Cross-screen money-agreement matrix + tests	Claude
L-17	2.6	Verify the bug ledger has no open user-facing money error	Claude
L-2	1.2	Deploy Firestore security rules	You
L-19	2.6	Prep the App Review note (educational planning tool; no money movement / linking / securities advice)	You
L-5	2	Description / keywords / subtitle / promo text	You
L-8	2.5	App Privacy 'nutrition label' must MATCH the privacy manifest	You
L-6	2	Category (Finance) + Age rating (4+)	You
L-9	2.5	Reviewer demo login (real account + sample data) in the submission notes	You
L-7	2	Privacy Policy URL + Support URL	You
L-11	2.6	B-L1 — Re-host the updated privacy/index.html (AI/privacy claim reconciled in code)	You
L-20	2.6	Decide: scope the launch US-only	You
L-21	2.6	Decide: track onboarding completion as the #1 launch metric	You
L-13	2.6	B-L3 — Disclaimer on every projection / 'on-track' verdict	Claude
L-14	2.6	B-L4 — Graceful network degradation	Claude
L-3	1.3	Cut production build #35 + verify OCR + keychain on a real device	You (EAS)
L-23	4	Confirm prices load from the LICENSED provider (not Yahoo)	You
L-12	2.6	B-L2 — Verify a Sentry event lands on the next production build	You
L-10	2.5	Test Delete-account end-to-end on a PRODUCTION build	You
L-22	4	Clean onboarding per persona (student / variable-income / professional / retiree) — numbers reconcile	You
L-24	4	Sign up → log out → recover account → log back in	You
L-18	2.6	Run the Maestro flows on a real device (auth-signup, smoke, b21-add-sheet, nw-donut, cashflow)	You
L-25	4	Physical-device test (gestures, keyboard, safe-area, large text)	You
L-4	2	App Store screenshots — 6.9in iPhone, on a REAL device (ML Kit blocks the Simulator)	You

L-26	4	eas submit --platform ios --profile production → TestFlight → submit for review	You
------	---	---	-----

You = account/legal/manual · Claude = in-repo. Statuses reconciled against code/records on 2026-06-26 (a few launch-checkl
 -deadline: ranks 1-16 can all happen NOW (before the build resets); 17-25 batch at build #35 (~Jul 1); 26 = submit. 'VERIFY' row

Blocker	Depends on L-1	18			AT BUILD #35
Blocker	WIRED (2026-06-23); VERIFY on build	19	done	Test	AT BUILD #35
Blocker	OPEN (needs build #35)	20	done	Test	AT BUILD #35
Blocker	OPEN (needs build #35)	21	done	Test	AT BUILD #35
Blocker	OPEN	22	done	Test	AT BUILD #35
Important	OPEN (needs build)	23		??	AT BUILD #35
Recommended	OPEN (needs build)	24	done	Test	AT BUILD #35
Blocker	OPEN (needs a device build)	25	10		AT BUILD #35

Blocker	Final step	26			SUBMIT (last)
---------	------------	----	--	--	---------------

*'list.md rows were stale — e.g. Firestore rules ARE deployed). The
vs are doc/memory-derived — confirm in code before relying.*

Notes / next step

You pick a vendor + API key (~\$10–50/mo EOD); then a ~1-file
PriceProvider swap in marketData.ts. Legal blocker.

take_home_agreement.test + number_agreement.test pass. Confirm
the % path specifically.

number_agreement.test.ts green. A wrong number = lost trust (L-7).

Re-confirm before each submit.

Deployed to finwise-app-jj with the privilege-escalation fix + emulator
tests. Verify active in console.

De-risks the fintech-licensing guideline.

Copy ready in finwise-appstore-listing.md; paste into App Store
Connect.

Declare Email, Name, Financial Info, Crash/Diagnostics — all 'app
functionality', none 'tracking'. Apple cross-checks.

Questionnaires in ASC.

Without it the reviewer can't pass the login screen → auto-reject.

finwise-legal is live; B-L1 changed the privacy copy so it must be re-
hosted.

On-device-only tips + ML-Kit OCR; no financial data/receipts leave the
device. Live URL must serve the new copy.

Confirm; don't market global. GLBA/state-privacy posture assumes
US.

Needs basic analytics (see Parked P-73).

Shared <Disclaimer/> on all judgment screens; coverage guard test.

allSettled + cache fallback; proven by
marketData/economicData/store prices offline tests.

739 tests green, tsc clean, T22 loop fix in. Push-button once quota
resets. eas build --local fails (macOS-26 keychain).

SDK + DSN + plugin + source-maps all set. Fire the Settings test event
and confirm it lands.

Guideline 5.1.1(v). Confirm it wipes cloud data + auth.

Use finwise-user-guide.md as the script.

Selectors have never executed on-device (ML Kit blocks the
simulator).

8 frames + captions + per-persona setup spec'd in finwise-appstore-
listing.md.

eas submit is separate from the build quota.

Parked - Backlog

Every consciously-deferred item, deduplicated across all docs (features, roadmap, qa-plan, ui-compliance, scorecard, mi
'Decision' columns are PRE-FILLED with Claude's recommended triage — override freely. Recommendation: only 7 items
doc(s) it came from.

ID	Category	Item	Status
P-1	Data/Integrations	Plaid / bank & brokerage linking (account aggregation)	Open
P-2	Data/Integrations	Auto-derive dividends from ticker (Yahoo yield/events)	Open
P-3	Data/Integrations	Ticker autocomplete + price-cache TTL	Open
P-4	Data/Integrations	Receipt OCR native rebuild (activate ML Kit) + tune parsing	Open
P-5	Data/Integrations	CSV import validation (format / length / dup / row-cap)	Open
P-6	Insights/AI	History-driven insight engine + notifications (richer than today's 9 rules)	Partial
P-7	Insights/AI	AI 'show your work' — consistent tappable explainer everywhere	Open
P-8	Insights/AI	Planning copilot — LLM Q&A over your data ('can I afford a \$600k house?')	Open
P-9	Insights/AI	Life-event scenarios (home, child, job change, sabbatical) side-by-side	Open
P-10	Retirement/Modeling	Drawdown / decumulation 'will it last?' view for retirees — deeper surfaces	Partial
P-11	Retirement/Modeling	Tax-aware drawdown (withdrawal order, cap-gains harvesting, Roth conversions, healthcare/LTC)	Open
P-12	Retirement/Modeling	Salary-growth assumption (contributions rise with raises)	Open
P-13	Retirement/Modeling	Filing status (married/HoH) + multi-country tax & account-type 'packs'	Open
P-14	Retirement/Modeling	Couples / household + shared goals (joint + individual views)	Open
P-15	Retirement/Modeling	529 college planning	Open
P-16	Retirement/Modeling	Life / long-term-care insurance planning	Open
P-17	Retirement/Modeling	Estate / legacy planning (beneficiaries, estate docs)	Open
P-18	Retirement/Modeling	Unemployed / transition mode (runway, COBRA, survival budget)	Open
P-19	Retirement/Modeling	Gig / partially-employed mode (variable-income smoothing, 1099 tax set-aside)	Open
P-20	Onboarding	'Sharpen your plan' progressive surface for deferred onboarding fields	Partial
P-21	Security/Privacy	Household/partner sharing under zero-knowledge encryption (key-wrapping via invite code)	Open
P-22	Security/Privacy	Multi-factor authentication (MFA)	Open
P-23	Security/Privacy	Dependency vuln scan (npm audit + Snyk in CI) — triage ~58 advisories	Open
P-24	Security/Privacy	SAST / static analysis (SonarQube / Semgrep) in CI	Open
P-25	Security/Privacy	Mobile binary scan (MobSF on the EAS build)	Open

P-26	Security/Privacy	Transport security hardening (HTTPS-only, cert/timeout handling)	Open
P-27	Security/Privacy	Slide-to-confirm / biometric on the heaviest actions (per-action)	Open
P-28	A11y	Screen-reader labels (VoiceOver/TalkBack) on the remaining ~26 screens	Open
P-29	A11y	44x44 touch targets (grow elements, not just hitSlop)	Open
P-30	A11y	Dark + high-contrast themes (token swap)	Open
P-31	A11y	WCAG AA contrast audit (text + data viz)	Open
P-32	A11y	Reduce-motion-aware micro-interactions	Open
P-33	UI/UX	Privacy-blur / hide-balances toggle	Done-verify
P-34	UI/UX	Runway / emergency-fund insight ('cash covers N months')	Open
P-35	UI/UX	Net-worth-over-time card on Home (trend from snapshots)	Open
P-36	UI/UX	Header + bottom tab-bar redesign	Partial
P-37	UI/UX	Legacy detail-screen redesigns behind nav (Budget/Transactions, Settings, Tips, Rewards)	Open
P-38	UI/UX	Single-total vs category-breakdown spend reconciliation (one source of truth)	Open
P-39	UI/UX	Skeleton loaders + offline/sync state matrix	Open
P-40	UI/UX	App-wide offline / sync indicator banner	Open
P-41	UI/UX	Undo toasts for reversible deletes ('Deleted · Undo')	Open
P-42	UI/UX	Reusable 'what's this?' tooltip + searchable glossary module	Partial
P-43	UI/UX	Money/date formatting standard (fix cents drift)	Open
P-44	UI/UX	User-pinnable / reorderable Home cards	Open
P-45	UI/UX	Raw-data / table toggle on charts	Open
P-46	UI/UX	Notification design system (caps, per-type controls, deep-link)	Open
P-47	UI/UX	Permission priming (camera/notifications) before the OS prompt	Open
P-48	UI/UX	Surface the encryption cue in the UI (lock / 'encrypted' line)	Open
P-49	UI/UX	Form-validation timing consistency (on-blur / submit)	Open
P-50	UI/UX	Named text styles (Title/Body/Caption) + line-heights	Open
P-51	UI/UX	Thumb-zone / Larger-text layout audit	Open
P-52	Stickiness/Growth	Push notifications (reminders / nudges)	Open
P-53	Stickiness/Growth	Savings-goals full UI (waterfall-backed: progress, priority, projections)	Partial
P-54	Stickiness/Growth	Gen-Z motivational framing + app-wide Simple Mode	Open
P-55	Stickiness/Growth	Deeper gamification + education micro-lessons + shareable wins	Open
P-56	Stickiness/Growth	Trends & Year-in-Review + shareable reports + widgets + weekly digest	Open
P-57	Tech-debt/QA	Full string internationalization (translate copy, not just numbers)	Open
P-58	Tech-debt/QA	Currency/locale formatting — on-device verification	Partial
P-59	Tech-debt/QA	Sentry full wiring	Done-verify

P-60	Tech-debt/QA	Data export (JSON/CSV) — user data-right + round-trip import	Open
P-61	Tech-debt/QA	Schema versioning + migrations on store hydrate	Open
P-62	Tech-debt/QA	Unit tests for untested core calcs (Monte-Carlo, corpus, asset returns, grossFromNet...)	Open
P-63	Tech-debt/QA	Service-layer error-handling audit (try-catch + typed fallback)	Open
P-64	Tech-debt/QA	Network timeout / retry on all external calls	Open
P-65	Tech-debt/QA	Deprecated-API sweep (e.g. Swipeable → ReanimatedSwipeable)	Open
P-66	Tech-debt/QA	Complexity-hotspot review (retirement cockpit, income grid)	Open
P-67	Tech-debt/QA	Dead/orphan code + legacy 'debts' array (B-42) cleanup	Open
P-68	Tech-debt/QA	Type-safety escapes ('as any' casts, store typing) audit	Open
P-69	Tech-debt/QA	Coverage gate on src/domain (e.g. 80%) in CI	Open
P-70	Tech-debt/QA	Adopt the design-review governance gate as a merge check	Open
P-71	Branding	App rename / trademark resolution ('FinWise' may be trademarked)	Open
P-72	Other	Performance / offline-first architecture (cross-cutting)	Open
P-73	Other	Analytics / telemetry (activation funnels, D1/D7/D30 retention)	Open
P-74	Other	Device-cloud E2E (Maestro on BrowserStack/Sauce for fragmentation)	Open

crosservices, onboarding-matrix, rename-candidates). Status: Open / Partial / Done-verify (doc says op
'BEFORE LAUNCH' (P-71 rename is a real blocker; targeted a11y; quick CI/error-handling; light analytic

en but code/memory says shipped — verify & drop). The yellow 'Your rank' + :s), 2 to VERIFY → drop, 12 'SOON (v1.1)', the rest 'LATER'. Source = which

Why parked / notes
Auto-pull balances/transactions behind an aggregator interface. XL effort, server-side (Cloud Functions). Biggest stickiness/friction lever.
Auto-populate dividends instead of manual entry.
Perf v2 polish; attribution/allocation/trend already shipped.
npx expo run:ios native rebuild, then test a real scan. Launch-adjacent — folds into build #35.
Import has no malformed-row rejection / bounds today. P1.
9-rule ranked engine shipped; the snapshot-history version ('gas +15%, stocks 12%') powering nudges is parked.
Explainability strong inline but not a uniform affordance. P2.
Differentiation.
Accumulation done; a drawdown view shipped for the 50yo review; deeper retiree framing open.
RMDs/order partly shown as transparency; deeper tax-awareness parked (sensitive engine).
Single-filer US-2026 only today. TaxPack / AccountTypePack abstraction (UK/CA/AU/IN). Tied to global expansion.
Partner invite partial. Distinct from the encryption key-sharing item (P-21).
Life-stage gap.
Life-stage gap.
Legacy/beneficiary fields deferred from onboarding S7.
Overlaps the runway insight (P-34).
Pay-yourself-a-salary, irregular cadences, tax reserve.
Checklist version shipped; the progressive 'add more to sharpen' surface (retirement COL, travel/medical budget, allocation, employer match, beneficiaries, risk tolerance, per-goal priority...) is spec'd separately.
Two passwords can't share one key today; fails safe (no crash).
App-lock + inactivity timeout already shipped; MFA is the remaining auth-hardening item.
Mostly build-time tooling. Add npm audit --audit-level=high + gitleaks to CI.
P1.
Insecure-storage/transport scan. P1.

Enforce HTTPS on Yahoo/BLS/Treasury fetches. P1.
App-lock biometric shipped; per-action confirm is the gap. P1.
Started on shared controls. Single biggest a11y gap. P0.
Many targets sub-44 via hitSlop. P0.
Light-only today. P2.
Not formally audited. P1/P2.
P3.
features.md says a 'hide-balances mask-ALL' shipped in build #34 — VERIFY in code; likely closable.
Needs a liquid-cash balance. Overlaps unemployed mode (P-18).
'Net worth up \$40k over 6 months.'
Greeting/streak/avatar header + nav still older styling.
Cockpit tiles route to not-yet-redesigned screens.
Avoid double-counting in recaps vs budget.
No skeletons / stale states. P1.
Partial offline handling (tips) but no global status. P2.
Destructive actions use blocking dialogs. P1.
Build-#34 added glossary InfoDots; the reusable tooltip/glossary module + deep-links may still be partial — verify scope. P2.
No written standard; cents-vs-whole-dollar drift. P2.
Home adapts by persona but users can't pin/reorder. P2.
Cognitive-load + a11y miss. P2.
Push configured but no frequency caps. P2.
P2.
Encryption real but not shown. P3.
P3.
Applied ad-hoc, no roles. P3.
P3.
Plugin configured; reminder logic not built ('near your dining budget').
Goals tab + funding engine exist (B-71); finish the waterfall-backed screen.
Start-now compounding framing; Retirement got only a local plain toggle.
Milestones/challenges/streak rewards.
Surface snapshot history as value.
Externalize UI strings (i18next), date/number-by-locale, RTL. USD formatter already shipped.
Model + formatter wired on active screens; on-device verify pending.
MEMORY + launch B-L2 say FULLY WIRED 2026-06-23 — VERIFY & drop (only the on-build verify remains, = L-12).

Delete-all exists; no export. P2.
Safe upgrades as fields keep being added.
simulate(), capitalNeeded(), solveRetireAge(), blendedReturn, investableValue... lack dedicated tests. P0/P1.
Verify BLS/Treasury/OCR/Firebase fetches aren't happy-path-only. P0.
No infinite spinner; every call needs a timeout + offline fallback. P1.
Migrate deprecated gesture-handler/date/expo APIs. P1.
Flag deeply nested logic for refactor. P2.
Unused exports, @deprecated scaffolding. Remove B-42 post-launch once no legacy data. P2.
P2.
Tokens/components centralized; the gate is written but not enforced.
REAL legal blocker before public launch. Front-runner 'Hatcho' (hatcho.io/.ai free, clean open-web TM). Next: pick 2-3, run USPTO TESS (classes 9/36/42), register domains, rename across app.
Needed to know if we're 'top-3'. Enables launch metric L-21.
Broader device-matrix coverage beyond the launch-checklist Maestro flows (L-18).
