Portfolio Performance / Grow & Track

Portfolio Performance / Grow & Track

Portfolio Performance / Grow & Track
Bond

Alternatives

Expected result	Result (Pass / Fail / N/A)
-----------------	----------------------------

All three show the SAME surplus (after debt). Home = this month (Actual); the others = Planned The \$ on the spending screen == the \$ Budget/runway uses	pass
--	------

Same rate on both = after tax AND 401(k) (not net-before-401k)	
---	--

Opens a screen TITLED "Cash-flow detail" with a back button; not a loop / not like Home	fail
Opens your portfolio / performance screen	pass
Shows the Roth verdict "👉 Lean Roth / Lean Traditional"	

Every money amount becomes ●●●●; tap again to restore	pass
---	------

Same masking via Settings	pass
Sheet shows a GOALS section above ACCOUNTS; assign part of the surplus to a goal → Save	pass
That goal's saved / progress bar increases by what you assigned	pass

Shows "need \$X/mo by <date>" + 🕒 on track / 🕒 behind	fail
---	------

Opens a plain-English definition	pass
----------------------------------	------

The amount field stays visible above the
keyboard (the original frustration) fail

Event appears in the Sentry dashboard
(org finwise-35) within ~1 min

Reads without "couldn't read that file" Pass

Completes; recap numbers reconcile
Donut + legend render; Assets – Debts =
Net worth shown pass

Chance-of-success + nest egg show;
disclaimer at the bottom pass

Works end to end

No crash

Date tested:

UI Design principal - no duplicate on the
screen where not adding value Fail

Taxonomy compliance Fail

Room left in your 401K -> you can still
contribute \$6500 this year tax-advantaged Fail

Concentrated in one account (92% of
your invested money is in single account -
add the holdings inside it and spread
across accounts to lower risk) Fail

Portfolio Performance Screen -> add
holding Fail

LCTX performance fail

Record Transaction -> it shows all
accounts

Fail

Notes

don't see a place where I can add
spending category as %

still loop

only hides NW amount displayed in
NW chip and Donut. All other visible.
Is this the objective?

Goal status bar always green.
Entered goal to buy home. Test
below goal bar ~\$24667/mo for 30
mo. I added \$10,000 from surplus.
Bar still green. Not sure where to
look for on track vs behind color
indicator.
Love this. Can we do this for all
definition in taxonomy - for asset
classes, NW, income?

there are still screens where fields hide behind keyboard with no ability to scroll. I think the problem is when the fields fits on one screen - I cannot scroll any further and if the field I am adding to is at the bottom of the screen - keyboard hides it.

(1) The preview screen from reading CSV file did not show ticker details for CD or ETFs. It did show for stock LCTX. (2) After adding those holding - short terms cash, money market, and CD appeared with right labels / details in right account - cash, options appeared in alternatives, but stock LCTX appeared under "brokerage" versus Stocks / ETFs with label "imported holdings versus LCTX. (3) When I click on "by account" - it shows other = 1408, brokerage = 1192, other 2100, stocks/etfs = 2500000 [not sure where this is coming from or what it means. by account is suppose to show balance and holding by institutions such as chase, vanguard. (4) Short-term bonds does not show when I click on "Bonds" button under "Explore your holdings box on NW screen -> is this accurate? (5) Alternatives listed as "other" on the same screen in "taxable Accounts". (6) When I click on options to enter

Chance-of-success + nest egg show -
> is this the hero box at the top right?

Device / iOS:

Activity tab, expense by bucket "set limits" appears twice - one as link next to title and button at the bottom of Expense by bucket section. NW section "explore your holdings" still has import, portfolio, bonds, alternatives. Should portfolio be Stocks/ETF portfolio to be consistent with taxonomy. This is same feedback as last time. What happened?

When I click on this insights it takes me to Retire screen which I am not sure what to do with. It should either go to screen detailing allowed contribution by IRS, monthly contribution added during onboarding, leaving a room for \$6500.

when I click it takes me to portfolio performance screen. I don't even understand where that insight is coming from.

cost per share only allows integers
no decimal allowed

YTD = -26.1%, 1Y = +28.6%, Text below LCTX under holdings says "\$1192. 965 sh. -29.0% since buy

Is Portfolio performance / grow &
track screen only for Stocks & ETFs?
If yes, why record transaction shows
all accounts.

No record transaction under Bonds

No record transaction under
alternatives
