

MoneyKeel · NET WORTH — FINAL MOCK v2 · 2026-08-04 · v9 + the change sheet REBUILT exactly as the Performance walk card: same band title ("HOW \$X BECAME \$Y"), same rows, same ending line

Net worth — the final screen

Banded ledger (your adopted UX v1.2) · Own–Owe above the dark-green hero · change % on cash + investments, denominator named · approved retirement words · centered class donut (validated palette, one-weight labels) · light-green group bars with totals · collapsed counts on a quiet second line · 16px air before every number column · conditional missing-data banner · cash = cash only (CDs → Bonds & CDs, money-market funds → Stocks/ETFs). All numbers reconcile: 8,000+838 + 348,495+5,819 + 450,000 = \$813,152 – \$418,000 = \$395,152.

STATE B — all collapsed. The 2-second glance: hero, plan line, donut, three group totals, debts, cushion — one screen, no scrolling. The app remembers what you leave open.

STATE C — first day (YOUR RULE, adopted): the FULL layout stays — Own \$0 — Owe \$0, \$0 hero, every band and group bar at \$0, the three ways in, debts and cushion in place — so a new person sees exactly what the screen becomes and how to move forward. The retirement card shows THE ONE app-wide sample (identical to Home's: "Sample: 84% odds of lasting to age 90 — a sample, not your number"), never a reinvented variant. No invented data: sample is labeled, percent/donut wait for real history.

STATE D — where the banner LIVES (your question): inline, on this screen, never a pop-up. It is a card that slots in directly under the hero — the rest of the screen stays exactly as it is. It exists only while a gap exists and disappears by itself when the gap closes. Tapping it opens a small bottom sheet listing each gap with its fix button (Reconnect · Set a price · Update the value). Nothing interrupts you: no alert, no modal takeover.

STATE E — now IDENTICAL to the Performance walk card (your order). Same dark-green band title in the "HOW \$X BECAME \$Y" form, same rows in the same order, same indent for the three parts of Wealth generated, same bordered ending line in dark green. Only the words that must differ do: "net worth" instead of "market value" (home + debts have no market feed) and the extra "Debt principal you paid" line the net-worth walk needs to sum. One structure, two screens. Wealth generated now sits at the SAME level as Beginning net worth, Contributions, Withdrawals, Debt principal you paid and Ending net worth — one indent level, one shared right edge for all six. Its three parts (Dividends · Interest · Change in investment value) indent one step in, in the quieter grey. The green background is gone: our light-green bar means "a section heading" (like CASH or INVESTMENTS on the main screen), and this is not a heading — it is a line in the walk that happens to have detail beneath it. Using the bar here also caused the misalignment, because a bar runs edge-to-edge while rows are inset. Every number in the sheet — including the WEALTH GENERATED total on its green bar — now sits on ONE shared right edge; the signs are gone (only the minus stays, because it changes the meaning). Beginning → Contributions → Withdrawals → WEALTH GENERATED (sub-heading: Dividends · Interest · Change in investment value) → Ending. Note the one required extra line on the NET-WORTH walk: "Debt principal you paid" (+\$200) — without it the walk cannot reach the ending net worth. And the end rows say "net worth", not "market value", because home + debts have no market feed; Performance uses our exact wording.

STATE F — what the banner tap opens (your question). A bottom sheet, same mechanics as the drove-it sheet: one row per gap — plain words on what's missing, what the app is honestly doing meanwhile, and the fix button that goes STRAIGHT to the cure (the LCTX row opens its holding editor at the price/ticker field; the E*TRADE row runs a sync, with Reconnect as the fallback that opens the connection flow). Fix a gap → its row vanishes; fix both → the sheet closes and the banner on the screen is gone. The sheet never shows a generic settings page — every button lands on the exact field that closes the gap.
